Identifying Software Problems Using Symptoms

The 20 Most Common Software Problems. Much of the software in existence today was initially written in an unstructured manner and then patched on an as-needed basis over a long period of time. This type of software structure results in what is known as "spaghetti code," which is complex and unstructured.

The 20 Most Common Software Problems | General Testing

If this problem first manifests itself in the code, it is still not a code fault. It is a fault in the program specification or a specification fault. The software design may not implement the software requirements specification.
