Human Genome Sciences was a biopharmaceutical corporation founded in 1992 by Craig Venter, Alan Walton and Wally Steinberg. It uses the human DNA sequence to develop protein and antibody drugs. It had drugs under development to treat such diseases as hepatitis C, systemic lupus erythematosus, anthrax disease, and cancer. It collaborated with other biotechnology and pharmaceutical companies, for ...

The Chimpanzee Genome Project is an effort to determine the DNA sequence of the Chimpanzee genome. It is expected that by comparing the genomes of humans and other apes, it will be possible to better understand what makes humans distinct from other species from a genetic perspective. It will also aid in the study of diseases that affect (or, conversely, do not affect) various primate species.

## **Chimpanzee genome project - Wikipedia**

Genomics is the new science that deals with the discovery and noting of all the sequences in the entire genome of a particular organism. The genome can be defined as the complete set of genes inside a cell.

*Coffea arabica* is a polyploid species, carrying four copies of the eleven chromosomes typical of the genus *Coffea*, totaling 44 ( $2n = 4x = 44$ ). Technically, it is described as an allotetraploid genome, the result of a hybridization between two diploid species, *Coffea canephora* and *Coffea eugenioides*, which doubled *arabica*'s chromosome number to 44.

## **Coffea arabica genome - worldcoffeeresearch.org**

Genome editing (also called gene editing) is a group of technologies that give scientists the ability to change an organism's DNA. These technologies allow genetic material to be added, removed, or altered at particular locations in the genome.
