An optimal decision is a decision that leads to at least as good a known or expected outcome as all other available decision options. It is an important concept in decision theory. In order to compare the different decision outcomes, one commonly assigns a utility value to each of them. If there is uncertainty as to what the outcome will be, then under the von Neumann-Morgenstern axioms the ...

Advantages. Optimal designs offer three advantages over suboptimal experimental designs: . Optimal designs reduce the costs of experimentation by allowing statistical models to be estimated with fewer experimental runs.; Optimal designs can accommodate multiple types of factors, such as process, mixture, and discrete factors.

Last update: 10th May 2013. Fixed a mistake in handling reflection case. Finding the optimal/best rotation and translation between two sets of corresponding 3D point data, so that they are aligned/registered, is a common problem I come across. An illustration of the problem is shown below for the simplest case of 3 corresponding points (the minimum required points to solve).

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
