Chapter 3 Abstract Small fiber neuropathy (SFN) is a neuropathy selectively involving small diameter myelinated and unmyelinated nerve fibers. Interest in this disorder has considerably increased during the past few years. It is often idiopathic and typically presents with peripheral pain and/or symptoms of autonomic dysfunction.

There are more than 100 kinds of peripheral nerve disorders. They can affect one nerve or many nerves. Some are the result of other diseases, like diabetic nerve problems. Others, like Guillain-Barre syndrome, happen after a virus infection. Still others are from nerve compression, like carpal tunnel syndrome or thoracic outlet syndrome.

Peripheral Neuropathy Symptoms What Is Peripheral Neuropathy? Peripheral neuropathy is a nerve disorder. It may cause numbness, tingling, and weakness. It can also cause pain. These symptoms usually start in the longest nerves in the body and so first affect the feet and later the hands. This is sometimes called the "stocking-glove" pattern.

## **Understanding Peripheral Neuropathy**

Peripheral neuropathy is a general term, which refers to disorders of the peripheral nervous system. The peripheral nervous system consists of all nerves distal to the spinal cord, and includes nerve fibers that either originate in the spinal cord (motor neurons) or terminate in the spinal cord (sensory nerves).
