About. The Astronomy Department at the University of Washington (UW) began in 1965 and has grown to 15 full and part-time faculty, approximately 20 postdocs, and 30 graduate students.

Department of Astronomy - University of Washington

Planetary habitability is the measure of a planet's or a natural satellite's potential to develop and maintain environments hospitable to life. Life may be generated directly on a planet or satellite endogenously or be transferred to it from another body, a hypothetical process known as panspermia. Environments do not need to contain life to be considered habitable nor are accepted habitable ...

Planetary habitability - Wikipedia

Eyes on the Solar System lets you explore the planets, their moons, asteroids, comets and the spacecraft exploring them from 1950 to 2050. Ride with the Curiosity Rover as it lands on Mars or fly by Pluto with the New Horizons spacecraft all from the comfort of your home computer.

Overview | Planets – Solar System Exploration: NASA Science

Radiocarbon Variations and Dating. Geoscientists use radiocarbon, or carbon-14, to establish a chronology of Earth's processes. Because of the 5,730 ± 40 year half-life of this isotope, carbon-14 dating is used in disciplines like geology, archaeology, geochemistry, oceanography, forensic sciences, and more.

Annual Review of Earth and Planetary Sciences | Home

New Horizons is the first mission in NASA's New Frontiers mission category, larger and more expensive than the Discovery missions but smaller than the Flagship Program. The cost of the mission (including spacecraft and instrument development, launch vehicle, mission operations, data analysis, and education/public outreach) is approximately \$700 million over 15 years (2001–2016).

New Horizons - Wikipedia

Stony Brook University has grown to become one of only four University Center campuses in the SUNY system with more than 25,200 students and faculty that have earned prestigious awards, including the Nobel Prize, Pulitzer Prize, Indianapolis Prize for animal conservation, Abel Prize and the inaugural Breakthrough Prize in Mathematics.

All that's especially true if we can build Hoyt's cislunar tether transport system, powered by the difference in gravitational potential between the lunar surface and the Earth (so moving materials from the Moon to Earth

is actually moving it "downhill" and you can exploit that through clever use of momentum exchange tethers). I think it's a reasonable argument that the Hoyt tether system ...
