Methods. A cross-sectional and exploratory study was carried out between January and March of 2012, in which the nature of incidents related to patient safety were investigated, as well as the way they manifest and other possible factors such as their cause, rather than the simple observation and description.

5 Whys is an iterative interrogative technique used to explore the cause-and-effect relationships underlying a particular problem. The primary goal of the technique is to determine the root cause of a defect or problem by repeating the question "Why?". Each answer forms the basis of the next question. The "5" in the name derives from an anecdotal observation on the number of iterations needed ...

Root-cause analysis is intended to reveal key relationships among various variables, and the possible causes provide additional insight into process behavior.. The causes emerge by analysis, often through brainstorming sessions, and are grouped into categories on the main branches off the fishbone.

As sketched out above, one might assume causal connections, or dependencies, among these skills. Thus, it is difficult to see how viable plans can be formulated without cause/goal and constraint analysis, just as it is difficult to see how evaluation can occur prior to creative thinking and idea generation.
