A thermobaric weapon is a type of explosive that uses oxygen from the surrounding air to generate a high-temperature explosion, and in practice the blast wave typically produced by such a weapon is of a significantly longer duration than that produced by a conventional condensed explosive. The fuel-air bomb is one of the best-known types of thermobaric weapons.

Thermobaric weapon - Wikipedia

A weapon, arm or armament is any device that can be used with intent to inflict damage or harm. Weapons are used to increase the efficacy and efficiency of activities such as hunting, crime, law enforcement, self-defense, and warfare. In broader context, weapons may be construed to include anything used to gain a tactical, strategic, material or mental advantage over an adversary or enemy target.

(ed note: This article was written in 1979 and is admittedly a little dated. But most of it is still true.) The Third Industrial Revolution is going to create two areas of concern and interest to military planners in the next thirty to fifty years. One of these is new technology that will create new problems of defense and military operations.
