NIMONIC alloy 263 is normally given a two-stage heat-treatment, that is, solution treatment and age hardening prior to service. This heat treatment is normally carried out in air. Material is usually supplied in the solution-treated condition and aged by the customer as part of the fabrication process.

High-temperature creep. In contrast to the behavior observed in steels, monotonic pre-straining of precipitation-hardened alloys, such as Nimonic 80A (Dyson and Rodgers, 1974) and aluminum alloys (Evans and Wilshire, 1985), can be detrimental to creep strength. In these alloys, pre-straining increases the density of mobile dislocations.

NIMONIC alloys consist of nickel and chromium, with the nickel content more than 50%. These alloys exhibit high-temperature low creep and are high performance alloys. Additives like titanium and aluminium increases the strength of the alloy. The commercially available NIMONIC alloys are NIMONIC 75, NIMONIC 80A, 81, 86 and NIMONIC PE11 and 16.
