Solar power is the conversion of energy from sunlight into electricity, either directly using photovoltaics (PV), indirectly using concentrated solar power, or a combination. Concentrated solar power systems use lenses or mirrors and tracking systems to focus a large area of sunlight into a small beam. Photovoltaic cells convert light into an electric current using the photovoltaic effect.

Wind power is the use of air flow through wind turbines to provide the mechanical power to turn electric generators. Wind power, as an alternative to burning fossil fuels, is plentiful, renewable, widely distributed, clean, produces no greenhouse gas emissions during operation, consumes no water, and uses little land. [better source needed] The net effects on the environment are far less ...

Cease to see no significant decline is what I expect. This Bakken shale play is too complex to safely predict black and white answers. For example, while drilling in remote locations would generally tend to be non-profitable (if the only change was in the price of oil), there are already predictions of significant drops in the cost of drilling Bakken wells (as fewer drilling and service ...
